

Pocket sized satellite navigation and speed camera detection

Product Features

Introducing the little brother to the Snooper Sirius - STRABO offers all the fantastic features but with the added extra of an MP3 player and all this, stored in a compact, pocket sized device! Now, take advantage of FREE LIFETIME SPEED CAMERA UPDATES!

Accurate mapping straight out of the box!

As soon as you take the Strabo out of its box it is ready to navigate you to the destination of your choice. Once you have powered up the unit simply programme in your destination and you are off. The Snooper Strabo enables you to find a destination by a number of different ways. You can search by city, street name, full seven digit postcode or select from the extensive points of interest list which includes everything from hotels to golf courses!

Once you are on your way, the Strabo offers turn by turn directions with a comprehensive on screen display on the 3.5 inch screen as well as clear voice instructions!

Genuine, accurate speed camera alerts!

As well as giving you the very latest in mapping information, the Snooper Strabo uses the Enigma speed camera database to offer you up to the minute speed camera alerts as you drive! The Enigma database is maintained by Snooper and is currently unrivalled by anything else on the market today. The database is updated daily and by connecting the Strabo to your PC, you are able to download the latest set of camera locations any time of day or night!*

As you approach a speed camera, the left hand side of the screen displays the type of speed camera you are approaching as well as the speed limit! This is all backed up by a comprehensive voice alert so you don't even need to take your eyes off the road!

Simple Installation - no more wires!

The Strabo comes complete with a windscreen mount which attached to the windscreen of any vehicle with ease. Simply slot the Strabo onto the bracket and off you go! What's more, the Strabo comes with a built in rechargeable battery which will last you approximately 4 hours. If your journey takes you over the four hour mark, simply plug in the supplied in-car power charger and the unit will remain powered for the remainder of your journey!

Intelligent technology

The Snooper Strabo incorporates a feature called AUTO RANGING. This feature means that the Strabo will give you directional and speed camera warnings with different levels of notice depending on your speed. For example, if you are approaching a speed camera in a 30mph zone, you will receive 200 metres notice as opposed to 400 metres notice if you were travelling in a 70mph zone.

Another excellent feature on the Strabo is the Smart Mute mode. When activated, it will only give you an audible speed camera alert when you are travelling above the current speed limit. If you are below the limit you will only receive a visual display which cuts down on annoying alerts!

Product Specifications
